

# Tropical Depression THREE QuickLook Posted: 17:00 CDT 06/05/2016

## NOAA and NOAA Partnership Stations Relative to the Storm

## Storm Analysis

As of 06/05/2016 17:00 CDT, water levels along the Gulf Coast of Florida are slightly elevated and range from approximately 0.6 to 1.1 feet above tidal predictions. Winds are generally less than 10 knots at this time. Winds gusted to 30 knots at Clearwater Beach and Old Port Tampa in the last couple hours. Barometric pressure has remained fairly steady over the past 24 hours.

Water Level and Meteorological plots available below are updated automatically. A line denoting Mean Higher High Water (MHHW) is displayed to provide an approximate indication of when flooding inundation may occur.

For additional data, please see the Center for Operational Oceanographic Products & Services website. For more information or archived products and reports, please see the Storm QuickLook Homepage.

BULLETIN

TROPICAL DEPRESSION THREE ADVISORY NUMBER 2

NWS NATIONAL HURRICANE CENTER MIAMI FL AL032016

400 PM CDT SUN JUN 05 2016

...HEAVY RAINFALL FROM DEPRESSION SPREADING NORTHWARD TOWARD  
FLORIDA...

WATCHES AND WARNINGS

-----  
CHANGES WITH THIS ADVISORY:

A Tropical Storm Watch has been issued for the coast of Georgia and northeast Florida from Altamaha Sound, Georgia to Flagler Beach, Florida.

SUMMARY OF WATCHES AND WARNINGS IN EFFECT:

A Tropical Storm Warning is in effect for...

\* Indian Pass to Englewood

A Tropical Storm Watch is in effect for...

\* Altamaha Sound to Flagler Beach

A Tropical Storm Warning means that tropical storm conditions are expected somewhere within the warning area, in this case within 24 hours.

A Tropical Storm Watch means that tropical storm conditions are possible within the watch area, in this case within 36 to 48 hours.

Watches or warnings may need to be extended northward along the southeast United States coast later tonight.

For storm information specific to your area, including possible inland watches and warnings, please monitor products issued by your local National Weather Service forecast office.

DISCUSSION AND 48-HOUR OUTLOOK

-----  
At 400 PM CDT, the center of Tropical Depression Three was located ABOUT 465 MI...750 KM SW OF TAMPA FLORIDA ABOUT 475 MI...765 KM SSW OF APALACHICOLA FLORIDA. The depression is moving toward

the north near 12 mph. A north-northeastward motion at a faster forward speed is expected tonight through Monday. On this track, the center of the depression is forecast to approach the coast of the Florida Big Bend area Monday afternoon.

Maximum sustained winds are near 35 mph with higher gusts. Some strengthening is forecast, and the depression is expected to become a tropical storm before reaching the coast of Florida.

The estimated minimum central pressure is 1005 mb.

#### HAZARDS AFFECTING LAND

-----  
RAINFALL...The depression is expected to produce rainfall amounts of 3 to 5 inches with isolated maximum totals of 8 inches possible across the northeastern Yucatan peninsula, western Cuba, and Florida.

STORM SURGE...The combination of a storm surge and the tide will cause normally dry areas near the coast to be flooded by rising waters. The water could reach the following heights above ground if the peak surge occurs at the time of high tide...

Indian Pass to Tampa Bay...1 to 3 ft with slightly higher amounts possible in a few locations.  
Tampa Bay south to Florida Bay...1 to 2 ft.

Localized coastal flooding and dangerous surf is possible along the Florida East coast, within the Tropical Storm Watch area.

The deepest water will occur along the immediate coast. Surge-related flooding depends on the relative timing of the surge and the tidal cycle, and can vary greatly over short distances. For information specific to your area, please see products issued by your local National Weather Service forecast office.

WIND...Tropical storm conditions are expected to first reach the coast within the warning area by Monday afternoon. Tropical storm conditions are possible within the watch area by Monday.

TORNADOES...A few tornadoes are possible on Monday across portions of Florida and far southern Georgia.

#### NEXT ADVISORY

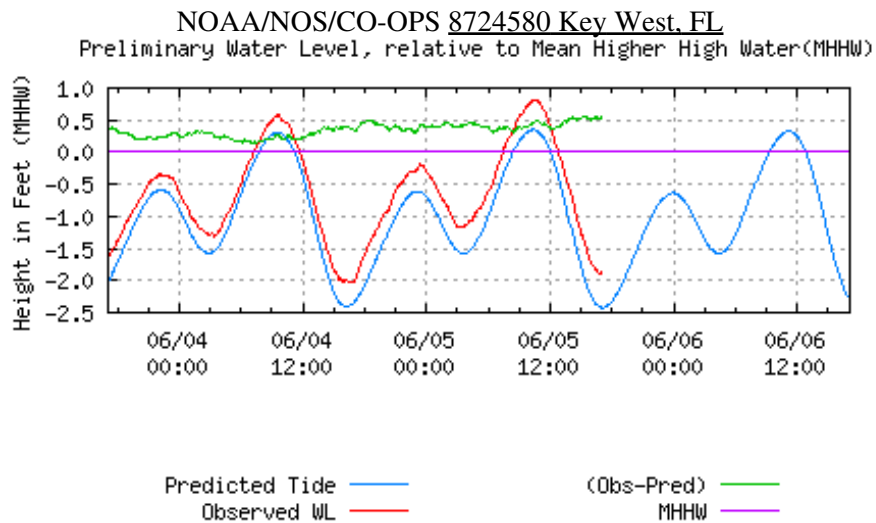

-----  
Next intermediate advisory at 700 PM CDT.  
Next complete advisory at 1000 PM CDT.
